Program Overview

The Environment and the Economy program represents a unique experience in economics education that brings together two groups: rising high school juniors and seniors selected for their leadership potential who want to study economics and have expressed an interest in environmental issues, and high school economics teachers who wish to enhance their teaching skills in the subject. The E&E one-week program encompasses 30 hours of instruction plus small group sessions and workshops. The combination of classroom instruction, question and answer sessions, small group discussion, and workshops presents information in a rich and varied format, encouraging active student and teacher participation. Economics professors selected nationwide for their expertise and teaching effectiveness lead classes using case studies to illustrate environmental issues, economics principles and leadership concepts.

E&E is designed to create a diverse learning environment for the students while teachers can observe, in action, the types of teaching methods advocated by FTE. In addition to study sessions, the program also includes leadership components which emphasize self-exploration through teamwork exercises. These activities provide a physical outlet and an enjoyable diversion from the economics lessons.

Teacher Goals:

1. Improve classroom effectiveness in the teaching of economics.
2. Exploration of an economic way of thinking, with numerous classroom applications.
3. Introduction to effective instructional materials and methods for use in the secondary school classroom.
4. Foster an environment for teachers to share ideas with their peers.

UCCS Graduate Credit

Registration is optional and is completed directly through UCCS online. Directions on how to enroll in this credit are included in this packet.

Schedule

A final schedule will be distributed at program registration on Monday. The start and finish times of the program will not change whatsoever.
